## OBJECTIVE

A React Native and MERN stack developer with project experience, adept at designing, implementing, and maintaining full stack applications. Proficient in utilising Java Script framework Like React Native & Express to develop efficient and scalable software solutions. Skilled in database management systems like MySQL and MongoDB. Seeking to leverage expertise in Full-stack development to tackle complex challenges, optimise code performance, and contribute to the success of cutting-edge projects within a forward-thinking organisation.

## EDUCATION

**Bangladesh University of Engineering and Technology**

B.Sc in Materials and Metallurgical Engineering (2018-2023)

**Govt. Azizul Haque College, Bogura**
Higher Secondary Certificate (2015-2017) (with Board Scholarship)

## TECHNICAL SKILLS

**Programming Languages** : JavaScript (ES6+), TypeScript, C++, C, CSS, HTML, React, Node etc.

**Frameworks** : React Native (JavaScript & TypeScript), Express (Java Script).
**Database** : MySQL , Mongo DB.
**Developer Tools** : Git, Postman, Source Tree, Planka.

## PROFESSIONAL EXPERIENCES

**React Native Developer | Vista Systech (**February 2025 - present)

### (1) Evocart - Multi-retailer E-commerce Mobile Application (MERN & React Native)

Led end-to-end development of a sophisticated React Native (TypeScript) mobile application with advanced AI integration capabilities.

**Technical Implementation:**

- Architected and developed a feature-rich React Native (TypeScript) mobile application supporting multi-retailer functionality.
- Integrated multiple AI services to enhance user experience:
  - OpenAI API for intelligent content generation based on image analysis.
  - PixelAI for automated background removal in product images.
  - Custom image generation based on product information and specifications.
- Implemented Meta Graph API for unified management of Facebook, Instagram, and WhatsApp business integrations.
- Developed comprehensive authentication system with OAuth support for multiple platforms (Facebook, Instagram, LinkedIn, Google)

**Key Responsibilities:**

- Independently managed full mobile application development lifecycle from conception to App Store deployment
- Coordinated with backend team to design and implement RESTful APIs leveraging existing MERN infrastructure
- Collaborated closely with UI/UX designers and key stakeholders to ensure optimal user experience and business alignment
- Implemented robust state management and performance optimization techniques to ensure seamless operation

### (2) Project Life - Maternal Health and Wellbeing Application (React Native)

Enhanced and expanded an open-source application focused on maternal wellbeing

**Technical Contributions:**

- Successfully refactored legacy codebase to improve maintainability, performance, and code quality.
- Integrated AI capabilities to generate detailed, accessible descriptions of medications for pregnant users.
- Implemented sophisticated animations to improve user engagement and application aesthetics.
- Developed WebView components to seamlessly integrate web-based resources within the native application.

**Key Responsibilities:**

- Conducted comprehensive code review and documentation of existing open-source codebase.
- Updated all dependencies to latest versions while ensuring backward compatibility.
- Implemented extensive performance optimisations resulting in 60% faster load times and reduced memory usage.
- Resolved critical bugs affecting user experience and application stability.

## PERSONAL PROJECTS

**(1) Educell** (Express, React, MySQL)

Cofounder and CTO

We offer a subscription-based platform that provides university students with organised, institution-specific study materials. Our service includes PDF textbooks, licensed software, teacher notes, exam solutions, question pattern analyses, and personalised suggestions. By consolidating essential resources in one place, we eliminate the hassle of sourcing materials, allowing students to focus on their studies. Our mission is to simplify the academic journey, helping students save time, stay organised, and achieve their academic goals efficiently.

**Estimated Launch Time:** September, 2025 (For adding Payment module, Phone verification & Resource Collection)

**FrontEnd (React with Yarn)**

Website for Student and Admin (React)

**Optimisations:**

- useMemo, useRef and useCallback hooks was used for minimising rendering and modify DOM elements.
- Redux is used for state management and reducing the API request for navigate through front end.
- Axios has been used for sending API request to backend and get data as json formate.
- **Modular design pattern** has been followed to increase reusability, encapsulation, scalability, and maintainability of project.

**BackEnd (Express with MySQL)**

Authentication and Resource Server

- JWT Token is used with Auth 2 authentication for increase security and scalability of the project.
- MySQL data base and rest API is used for handling API request.
- mysql2 to create complex Query on the database.
- Email and phone verification is applied for user registration.
- Input Validation (JOI), Rate Limiting, HTTPS enforcement and others security measure to prevent DoS and CSRF attack at the backend.

**(2) TuitionLagbe** (Express, React Native, React, MySQL)

Cofounder and CTO

A startup project to reduce the hassle of finding private tutor for guardian. TuitionLagbe will match the tutor by location and some preference (Like Tutor's institution , teaching medium, duration etc) and make a perfect match with suitable money transaction for both tutor and guardian. It will be added on top of educell project. We are moving on mobile devices with this project.

**Estimated Launch Time:** December, 2025 (Map integration and Optimisation per device)

**FrontEnd (React Native, React)**

Android and iOS app (React Native with Expo Platform)

Website (Extension of Educell)

**BackEnd (Express, MySQL)**

Add teacher and student data on resource server of Educell.

**Please check my Portfolio for check out all the projects I had worked on and more information about myself.**

## COMPETITIVE PROGRAMMING

**Codechef 1652 (Country Rank 533)**

· Earned 78 Points in last 6 contest.

**Codeforces 1287 (Country Rank 858)**

· Earned 246 Points in last 6 contest.

## PROBLEM SOLVING

· Solved more than 200 LeetCode problems.

· Solved more than 750 problems combined on all platform.

## DATA STRUCTURE AND ALGORITHM

· Dynamic Array, Queue, Stack, Hash Table, Heap, Linked List, Adjacency List, Tree, Graph etc.

· Sorting, Searching, Recursion, Backtracking, Dynamic Programming, DFS, BFS, Tree Traversal, Two pointer etc.

## OTHER SKILLS

· Typing speed up to 100 WPM (Avg. 80 WPM).

· Good Leadership, Communication and Management skill.

Lead Titumir Hall Volley Ball Team 2023 and Athletics Team 2023.

Managed Titumir Hall mess for one month successfully.

· Very Punctual and Competitive.

Participated Competitive Gaming for 3 year (2019-2022) represent the country in International Level PMNC(2022)
